Winter Plan August 2018

Proud To **Care**
Make It **Happen**
We Value **Respect**
Together We **Achieve**

1.0 Introduction

The aim of the Shrewsbury and Telford Hospital (SATH) winter plan is to ensure internal processes, systems and capacity (workforce and beds) are fit for purpose and resilient to meet the anticipated level of demand and maintain and optimise patient safety.

This paper provides a summary of the winter planning process, and the main actions for SATH. There has been a weekly winter planning group at SATH, in order to ensure a whole Trust agreement on priorities, risk and objectives. The broader process has been managed system-wide, through the A&E Delivery Group (AEDG) and System A&E Delivery Board (SAEDB).

National Winter Planning 2018/19 Guidance was issued on 22nd March setting out the requirements for preparing for winter 2018 including information on winter funding 2018/19 and the requirement to produce a winter demand and capacity plan.

Key points from the guidance:

- There will be no additional winter funding in 2018/19 over and above the £2.3 million allocated.
- Systems need to demonstrate that winter plans are embedded in both system and individual organisation operating plans.
- There is a requirement to produce a separate winter demand and capacity plan.
- Winter Plans to include appropriate phasing profiles to reflect seasonal changes in demand, especially related to winter.
- There is a system-wide approach to the winter plans that aligns key assumptions between providers and commissioners which are credible in the round.

SATH attended an NHSE Winter Planning Workshop in April 2018 and there have been two local system wide planning workshops held in July.

An internal winter planning group has been established with representation from all four Care Groups. The aim of the winter planning group is to look at ways we could improve patient flow on both sites and protect RTT activity. This will enable the flow from the Emergency Department (ED) to be maintained and keep the number of long waits within ED to a minimum.

2.0 Review of winter 2017/18

A review of the winter schemes implemented in 2017/18 was undertaken and Winter Planning – Lessons Learnt (Appendix. 1) was presented to Trust Board in May 2018.

3.0 Operational Plan 2018/19

In order to maintain high quality, kind and safe care within the context of:

- national targets and standards
- workforce constraints
- the financial control total and
- infrastructure challenges

The operational plan for 2018/19 addresses three key ambitions which will support winter resilience:

- Improving patient care and experience
- Reducing our reliance on temporary staffing
- Improving efficiencies and reducing waste

Within these ambitions there are some are six high impact change programmes 3 of which are led by SATH.

- SAFER
- Stranded patient programme
- ED systems and processes

3.1 Implementation of the SAFER programme including Red2Green and Criteria Led Discharge

The management of patient flow is an ongoing and consistent challenge for the Trust, and the majority of acute Trusts in England. During 2017/18 the Trust has made some progress with embedding the Red2Green initiative. The Clinical Programme Lead for SAFER, along with the team of Red2Green Trackers, focuses solely on the delivery of the SAFER Patient Flow Bundle and works with clinicians and managers to reduce non-value added time for patients and work to get them home sooner.

The work to deliver the SAFER programme continues as a priority into 2018/19 with a key focus on setting the clinical criteria for discharge and setting an expected date for discharge (EDD). This is recognised as a key enabler to reducing the number of beds consumed by the 'stranded patient' cohort.

3.2 Stranded Patient Programme

We already know that the greatest opportunity to reduce bed days is by focusing on the 'stranded patients'. Since January 2018 a programme of work has been undertaken to reduce the number of patients within our hospitals that have a length of stay greater than 7 days. The programme of work focuses upon both prevention of stranded patients via early identification and case management of patients using tools developed by the Emergency Care Intensive Support Team (ECIST). Reducing length of stay for 'stranded patients' will reduce the number of bed days consumed. The work that has been undertaken since January 2018 has demonstrated a reduction in the number of bed days consumed by stranded patients and has resulted in the reduction in the number of beds open. Addressing the 'stranded' patient cohort will also enable a reduction in the bed occupancy rate. The aim is to reduce this to 92%, enabling capacity to match variation in demand and improve the flow of patients to wards and assessment areas from ED.

3.3 ED systems and processes

Over the past 12 months there have been several external reviews of the systems and processes within both of our EDs. This has resulted in several key actions needing to be

undertaken; e.g the use of both Clinical Decisions Units (CDU), the streaming process at the front door of each ED and the role of the ED coordinator.

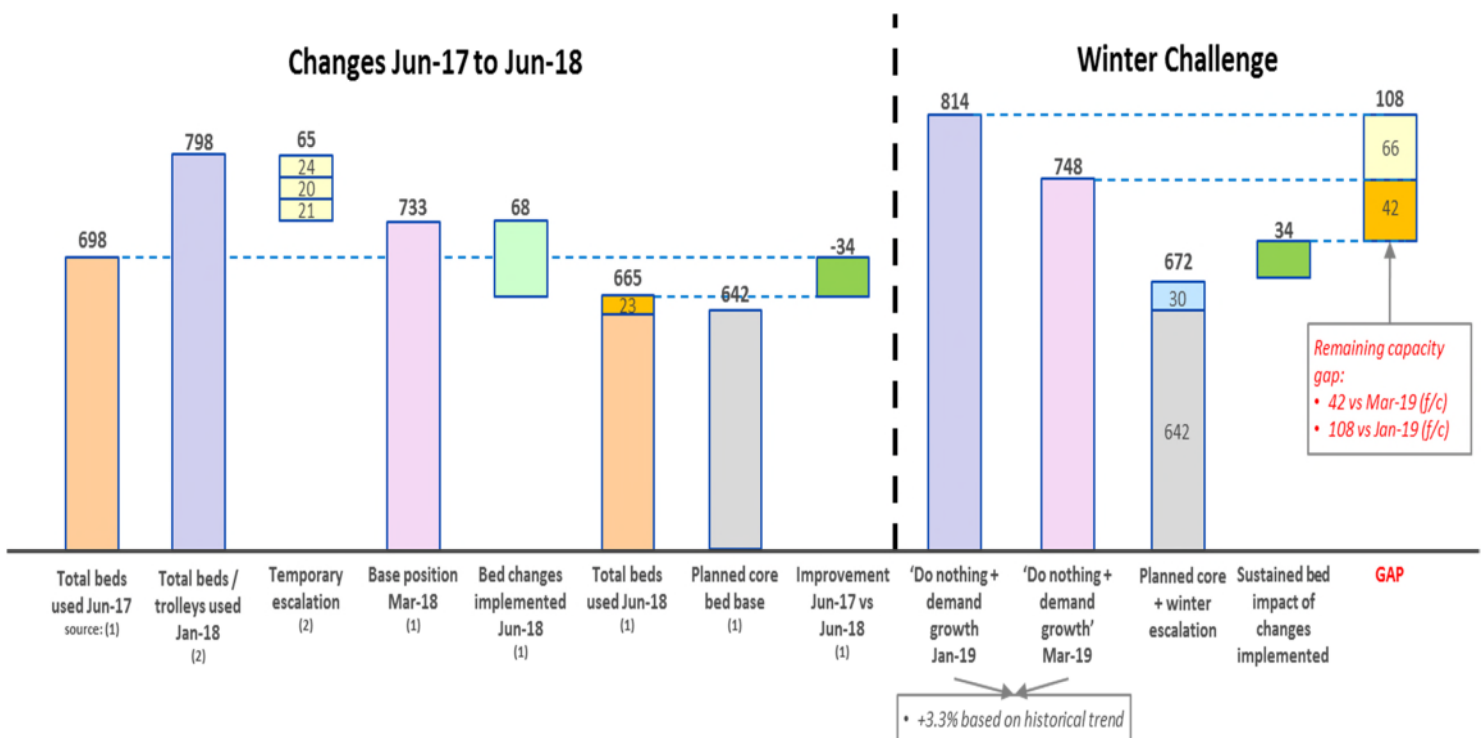

All of the above objectives are monitored at the weekly Urgent Care Programme group and the A&E Delivery Group.

4.0 Bed capacity required for winter.

The diagram below aims to describe the basis on which a bed capacity requirement has been calculated. The left hand side of the diagram provides the actual number of beds reported in use at key points in the year. The right hand side of the diagram describes forecast demand scenarios (including growth) and the associated bed gap which the winter plan needs to address.

The winter forecast shows the total additional capacity required:

- To meet the peak (January 2019) of 814 requires an additional 172 beds against the core bed base of 642 beds.
- To meet the March 2019 demand of 748 requires an additional 105 beds against the core bed base of 642
- The 'peak' represents the maximum declared number of beds and includes additional patients on wards and other pressures. The March level represents the 'average' winter position. Forecast growth has been added to these figures. In addition, the June 2018 bed position was compared to June 2017 to calculate the impact (benefit) of the stranded patient reduction

Through the weekly winter planning group, the SATH team developed a prioritised list of schemes, based on impact (primarily bed capacity and benefit to flow). This is attached at appendix (2). These schemes were then discussed at the system group alongside schemes from across partner organisations. The additional offer of national capital from NHSI to add further bed capacity has also been factored in (still to be ratified at national level at the time of writing). The full system set of schemes, linked to impact, has been discussed at the AEDG and will be submitted to the SAEDB in late August for ratification.

The table below indicates the interventions that are being put in place subject to the financial agreement at the A&E Delivery Board at the end of August.

Intervention	Acute bed impact		
	Max potential	Plan for peak	Plan for 'March'
1. Support complex discharges: To manage the FTT list at current performance levels (c.67) to avoid winter increase (c.112)	45	45	27
2. Avoid acute admissions: Through frailty services and community step up services	14	8	8
3. Improve / maintain improvement in acute flow (LOS):	130	55	50
i) Stranded patients	60	40	40
ii) Community IV therapy	40	5	5
iii) Effective acute assessment (AMU / SAU)	10	5	5
iv) Earlier time of discharge (before 12)	20	5	
4. Increase acute capacity:	104	54	30
i) Planned winter capacity (wards 8 & 21)	30	30	30
ii) Planned 'modular ward'?	30		
iii) Escalation / surge capacity (DSU)	44	24	
Total	293	162	115
<i>Forecast capacity requirements</i>		172	105
Remaining gap		10	-10

There are a number of key risks which have been identified which will impact on winter:

- Workforce availability (including sickness increase);
- Activity exceeding planned capacity;
- Unprecedented impact from Flu;
- Higher levels of infection resulting in closed wards
- Adverse Weather

5.0 Next steps

- Finalise and endorse the list of system schemes based on available funding (SAEDB)
- Identify a contingency set of schemes in the event of additional national funding
- Focus on recruitment of key staff both substantive and bank in order to support winter capacity
- Implement the additional the ward capacity supported by the national capital

The Trust Board is asked to note the contents of the winter plan paper and further update will be provided at the September Trust Board.

Review of SATH Winter plan 2017/18

Proud To **Care**
Make It **Happen**
We Value **Respect**
Together We **Achieve**

1.0 Introduction

This paper provides an update to the Trust Board on the success of Shrewsbury and Telford Hospitals NHS Trust (SATH) Winter Plan 2017/18, during a very challenging winter within the NHS. The paper details the schemes and key enablers that were put in place; the impact that the schemes realised and the next steps to plan for Winter 2018/19.

2.0 Background

As part of SaTH's operational plan in 2017/18 there were a set of key internal actions and programmes of work that needed to be in place, in order to maintain high quality and safe care and support winter resilience from November 2017 to March 2018.

The key actions were as follows;

- Reconfiguration of the bed base
- Implementation of SAFER (Red2Green)
- SaTH2Home
- Clinical Decisions Unit (CDU) at PRH

In addition to the above schemes, key enablers were required in order to release bed capacity and facilitate timely discharge;

- Discharge Lounge
- Ambulance handover nursing support
- Weekend discharge teams
- Frailty front door service

As part of the system wide plan, external schemes were put in place to avoid admission to an acute bed base and support patients in their own homes.

- GP Primary Care Streaming at PRH
- 10 admission avoidance beds
- 20 discharge to assess beds
- 7 day brokerage service
- 4 extra care beds in Shrewsbury
- Hospital Activity Liaisons Officer (HALO) to avoid unnecessary handover delays

3.0 Internal Schemes and key enablers

Bed reconfiguration

The reconfiguration of the bed base between scheduled care and unscheduled care was to ensure the right number of beds were available within medicine to support the increased demand throughout winter. Although there was an increase in the core bed stock for medicine this did not stop further outlying of patients on the surgical wards due to demand exceeding capacity.

SAFER (Red2Green)

There have been significant challenges in embedding the SAFER principle and therefore achieve the pre 10am and 12 midday discharges that were required to maintain patient flow. Significant workforce

constraints has restricted the roll out progress, however going forward the SAFER methodology will form part of the respiratory value stream roll out programme. During winter, performance against this metric was 17% of discharges before midday against a standard of 33%.

SATH2Home

The above scheme has been successful in working with our local authorities to ensure that patients are returning home with packages of care much quicker than in previous years. The key constraint with the scheme is the geographical coverage across Shropshire and Telford and Wrekin as it restricted to certain postcodes, however further work is being undertaken with a view to expanding the service. On average between November and March 22 patients per week went home with SATH2Home provision. An analysis is detailed below.

- **655** total discharges facilitated
- **22** on average per week
 - **12** with SaTH2Home care
 - **10** with SaTH2Home intervention (care not req.)
- **2** days average care for bridging patients
- **5** days average care for enhanced discharge patients

Clinical Decisions Unit

The Clinical Decisions Unit (CDU) opened on 4th April 2018, due to unforeseen delays with the building works. Therefore we were unable to stream patients from the emergency department to avoid admission and create cubicle capacity.

3.1 Key enablers

Discharge lounge

There is a well-established and utilised discharge lounge on the PRH which supports wards to improve patient flow. On a daily basis approximately 20 patients are transferred to the discharge lounge before midday thus creating flow from the emergency department. To support winter a discharge lounge was established on the RSH site adjacent to ward 32. The discharge lounge was open 7 days per week between 9am and 9pm and could accommodate up to 30 patients per day. Utilisation of this area was between 45% and 50% per day and therefore did not realise its full potential. Further options are being scoped to look at alternative settings for the discharge in preparation for winter 2018/19. A discharge lounge is fundamental to support the pre 10 am and pre midday discharges.

Ambulance handover nursing support

Both sites had additional nurses within the Emergency Departments (EDs) to support the timely handover of ambulances. This ensured that offload times were within the standard and demonstrated a reduction in ambulance handover delays from the previous year.

The table below demonstrates the improvement from the previous winter.

	Nov 16 to Mar 17	Nov 17 to Mar 18	Variance	% Improvement
SATH Ambulance handover 15 minutes	10078	8922	-1156	11.5%

Weekend Discharge team

Weekend discharge teams comprised of additional doctors, supported by therapies, pharmacy and phlebotomy. The purpose of the team was to increase the number of discharges over the weekend, in order to improve flow from the emergency departments and create additional bed capacity to manage surges in activity. The full benefit of the weekend discharge teams was not realised, because frequently they were covering medical vacancies and sickness within the acute medical team. However, if they had not been in place then discharges at the weekend would have not been at the level that was achieved.

Frailty service

A frailty service was implemented in November 2017 on the RSH site, working within a multi-disciplinary team to prevent admissions and to reduce the length of stay for those patients. Since its implementation there have been 92 fewer admissions per month and a reduction in length of stay in the >75 age group.

Stranded patient metric

The Emergency Care Improvement Programme (ECIP) defines stranded patients as those with a length of stay of seven days or more. In December 2017, there were 350 patients in SaTH with a length of stay greater than 7 days. A review of these patients was undertaken to understand what they were waiting in hospital for, and could we expedite their medical plan and reduce their length of stay and ultimately get them back home. This work was undertaken with our system partners and the table below identifies the significant improvement that has been made to reduce the number of patients in hospital with a length of stay of 7 days or more.

Hospital	Base Position Dec 17	02/04/2018	09/04/2018	16/04/2018	23/04/2018	30/04/2018	07/05/2018	14/05/2018	21/05/2018	28/05/2018
RSH	185	180	175	170	165	155	145	140	135	125
PRH	165	145	140	135	130	125	120	110	105	100
Total Target	350	325	315	305	295	280	265	250	240	225
Actual Number of patients >7 days		317	306	290	283	274	248	244		

4.0 Key Challenges

Emergency admissions at both hospitals over the winter period 2017/18, exceeded capacity within the core bed base and therefore additional capacity was opened within our day surgery units. Additional patients were placed on wards in accordance with the Hospital Full Protocol (HFP) to reduce the pressure within the Emergency Departments (ED). There were 57 12 hour trolley waits between November 2017 and March 2018, 30 of which happened in January 2018. Further challenges were faced with the adverse weather conditions in December and January which had an impact on staffing levels across wards and departments.

The Trust received a national directive from the Emergency planning team to cancel all routine elective activity (inpatients, daycases and outpatients) to free up workforce resource to support patient

flow and create bed capacity to accommodate admissions. This impacted on the year end 18 week Referral to Treatment (RTT) performance and the Trust ended the year with performance at 91.3% against a national target of 92%.

5.0 Next steps

The Trust together with system partners has undertaken a review of winter 2017/18 in April 2018. It was a very challenging winter and whilst some of the schemes provided benefits, the impact was limited. The next steps are to take the learning from 2017/18 and work with our system partners to produce a fully integrated system plan. Further workshops are planned in June and July 2018 and the System Winter plan will be presented to the A&E Delivery Board in September 2018.

6.0 Recommendation

The Trust Board is asked to note the contents of the update paper, and the further actions that are being undertaken in preparation for winter 2018
