CT Renal Function

The criteria for checking renal function are included below, as per the Royal College of Radiologists' guidance:

- Known renal disease
- Diabetes mellitus
- Congestive cardiac failure
- Age 65 years or older
- Taking nephrotoxic drugs

CT scans that DO NOT require eGRF as contrast enhancement is not required include:

- CT brain – Intracranial haemorrhage
- CT KUB – Renal calculi
- HRCT of the Chest – Interstitial disease
- CT Chest – Nodule follow up
- Orthopaedic CT for fractures
- CT Sinuses
